

Collaboration Made Easy

Get a razor sharp productivity tool for SharePoint. File sharing, collaboration, and social interaction made easy, mobile and effortless.

- No implementation
- No maintenance
- No local updates

With SimplySo, employees will have a much easier time creating and joining workgroups, engaging in discussions, uploading photos and files, searching for content and much more. All of this without ever removing data from the safe environment of SharePoint.

SimplySo consumer-izes the user experience of SharePoint, making it as easy to use as any social network – no matter which platform or device used. The responsive and intuitive design of SimplySo lets users focus on what matters most - getting work done regardless if their favorite device is a PC, tablet or smartphone.

Poor user interface often leads to low adoption rates and the tool being under-utilized.

SharePoint

Platform suite of features and services that are coupled together to offer a business solution to the end customer. However, the user journey/experience with some of the core functions around document management and content management are not particular easy to use, especially when compared with social media sites.

When using OneDrive for Business, Delve, Email, Calendar, Newsfeed and SharePoint within Office 365, the user experiences the siloes of information stored within Office 365. This user experience becomes a pain point for adopting Office 365 completely, forcing 3rd party sites such as Dropbox to be adopted.

Simple is one thing SharePoint definitely is not.

SimplySo for Office 365

Built as a website that sits on Azure, SimplySo connects online and places the easy to navigate layout in front of the user – making it easy to display information without having to move and host the data within SimplySo.

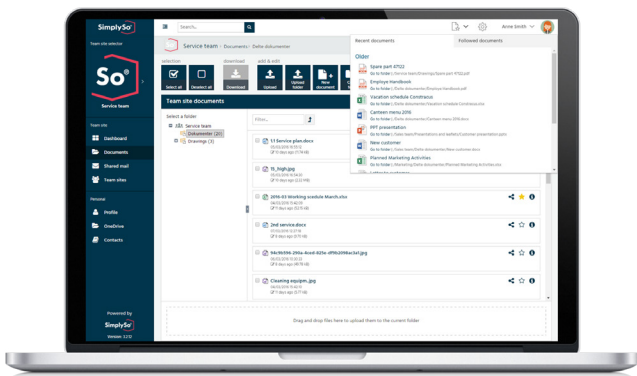

SimplySo is a transparent solution, meaning it displays and secures access to shared documents/libraries while taking advantage of smart features from SharePoint, OneDrive for Business, Delve, Email, Calendar and Newsfeed – in a single user interface.

SimplySo makes it easy to collaborate.

SimplySo versus Microsoft Teams: What's the difference?

Microsoft Teams - like Groups and Yammer – is a vertical solution. Microsoft Teams gives the user an enhanced Skype experience, with the possibility to do group conversations and include documents, etc. – like Microsoft Groups and IM. And because Office 365 offerings are siloed, the user will find it hard to navigate between team sites and functions to complete the everyday task.

SimplySo is a horizontal solution. This means that it works across many office 365 tiles in order to get everyday tasks done. Office 365 comes with a lot of complexities and it's almost unusable out of the box, for the average user. SimplySo takes the most used functionalities within Office 365 and combines it into a simpler user interface. Doing so the user doesn't have to switch between tiles.
